RYAN ALLEN

BUILDS PRODUCTION SOFTWARE

FLAGSHIP	corewise.video
USERS	1,800+
TOKENS PROCESSED	600M+
FRONT ENDS	5

Chesapeake, Virginia · ryanallen757@gmail.com · 757.477.4905 · linkedin.com/in/ryan-allen-d · github.com/ryanportfolio

Founder of fullbuild.ai, a one-person product studio. Builds and ships revenue-generating software end to end: idea, design, architecture, code, deploy. Work spans full-stack web apps, AI systems, and developer tools. **My portfolio:** <https://fullbuild.ai>

find the bottleneck → build the tool that removes it → measure what it costs to run → audit the output automatically → read the traces, study the failures → ship what works, cut what doesn't

S-01 EXPERIENCE

DRAWN TO SCALE

Full-Stack AI Engineer

DEC 2025 – PRESENT

fullbuild.ai · self-founded product studio · Remote

- corewise.video · 1,800+ registered users, paying subscribers, 600M+ tokens processed. Extract wisdom from any link; six independent AI models process it in parallel. One TypeScript backend serves five front ends: web, installable PWA, Chrome & Firefox extensions, and MCP server. React 19, Node/Express, Postgres with Drizzle, Stripe billing, Google OAuth and email authentication
- truenote.org · RAG answer engine for call-center teams: Postgres with pgvector, every search scoped in SQL to the user's program and clearance level, then re-checked after retrieval so nothing out of scope is ever served. 399 automated tests across the API, web app, & compliance scripts
- kinefractal.com · Python quant research system. One engine runs the backtests, the dashboard, and the paper trades, so all three agree. 678 tests, 314 of them on the broker order path. 60+ strategy experiments and failures logged; findings drive my own live investing
- willaicite.com · GEO/AEO audit tool: scores any URL on whether AI answer engines will cite it. Fixed rules, no model call, no randomness, with 161 tests and a frozen set of reference pages that fail the build if any score shifts. TypeScript on the Node 20 standard library, zero runtime dependencies
- corewise.academy · technical content built for AI agents to consume as well as people: llms.txt index across the library, schema.org JSON-LD on every page. 22+ published guides and the 11+ agent skills I run to sharpen my own output. Astro and MDX
- savetokens.tips · token-efficiency research from my own AI coding work, measured across 100k+ logged commands. A daily Node job regenerates the static site from fresh data and deploys to Vercel, refusing to publish stale numbers
- STK · Rust binary hooked into Claude Code's file reads: oversized reads come back as a line-numbered outline the agent fetches ranges from instead of a full dump, and anything it cannot parse passes through untouched. Built after mining 250 Claude Code sessions showed 85% of oversized context came from a single tool. 38 tests
- fullbuild.ai · portfolio, built with Next.js/TypeScript/React Three Fiber. WebGL layer throttles its own resolution when frames slip, and skips loading entirely on reduced motion or weak hardware

S-02 FEATURED PROJECTS

strictcall · LangGraph agent that answers plain-English questions against a SQL warehouse · [live demo](#) · github.com/ryanportfolio/strictcall

Every tool call is validated against a Pydantic contract, inputs and outputs both; the SQL tool parses each statement and rejects anything but a single SELECT. One backend interface serves DuckDB today with Snowflake stubbed behind it, and it ships as a CLI, a streaming web chat, and a hand-built Amazon Bedrock AgentCore Runtime service. 42 tests; 8/8 on the deterministic eval set.
Python · LangGraph · Pydantic · DuckDB · Railway · GitHub Actions

Harness Firmware · self-syncing operating layer for Claude Code and Codex · github.com/ryanportfolio/Harness-Firmware
The template every new AI-assisted project spawns from: standing rules, session hooks, committed project memory, and 20 agent skills authored once and generated into Codex adapters, with CI that fails the build if the two drift apart. Installable as a Claude Code plugin, and lessons learned in any spawned project flow back into the template.
Claude Code · Codex · GitHub Actions

S-01 EXPERIENCE, CONTINUED

Senior Team Lead, Workforce Management

AUG 2025 – PRESENT

TTEC, public-sector programs · Remote

- › Build Excel/VBA tools that clean and merge data, saving 6+ hours a week and cutting errors; administer Verint WFM and automate time-off approvals with built-in staffing safeguards.
- › Lead and coach five real-time analysts; set priorities, check work, grow the team.
- › Own scheduling for ~1,000 employees across 26 queues (shift design, accommodations, rotations) and match staffing to demand each interval (VTO, OT, and skill moves).

Workforce Management Specialist

AUG 2021 – AUG 2025

TTEC · Remote

- › Built a monitoring system joining live SharePoint data with agent activity to verify attendance and flag missing agents across 800+ employees.
- › Wrote Excel macros for daily absenteeism analysis, surfacing productivity trends, outliers, and no-call/no-show coaching flags.
- › Ran real-time demand and availability for public-sector programs to hold 90%+ service levels across Genesys, NICE IEX, Verint, and Alvaria.

Web Developer

2018 – 2021

RyanWordPress

- › Built brand-matched WordPress sites; improved usability and load times, hardened against vulnerabilities via security reviews.

Team Supervisor

2020 – 2021

Faneuil

- › Led 25 QA-focused agents; reviewed KPIs (accuracy, AHT, hold time), coached staff, handled escalations.

S-03 OTHER PROJECTS

- › **Local-CPU-only-PTT** · offline Whisper speech-to-text dictation that runs entirely on a normal CPU, no cloud, no GPU: push-to-talk from the system tray with automatic speech detection · [github.com/ryanportfolio/Local-CPU-only-PTT](#)
- › **tracebench** · benchmark for whether an AI coding agent admits it is wrong: 18 tasks derived from real session failures, graded by deterministic checklists with no model judge. CI re-grades every published run weekly, so scores cannot drift silently. Claude Code 0.96, Codex 0.81 on the correction set · [github.com/ryanportfolio/tracebench](#)
- › **SecureWall** · Windows firewall that blocks all connections by default and asks before allowing new ones; approvals expire so nothing stays open by accident. 52 automated tests · [github.com/ryanportfolio/SecureWall](#)
- › **ZipFlow** · ZIP file extractor built from scratch with no outside libraries; protects against malicious archives and extracts safely so a failure cannot corrupt your files. 46 automated tests · [github.com/ryanportfolio/ZipFlow](#)

S-04 SKILLS

applied AI	generative AI · large language models (Claude, GPT, Gemini) · prompt engineering · RAG · vector search · embeddings · evals and LLM-as-judge · AI agents · multi-agent systems · model orchestration · Model Context Protocol (MCP) · human-in-the-loop
product engineering	TypeScript · JavaScript · Node/Express · REST APIs · authentication (OAuth) · Stripe · Next.js · Postgres · pgvector · Drizzle ORM · SQL · Python · Rust · Tauri · Docker · Vercel · Railway · Git · GitHub Actions · CI/CD
frontend + design	React · Tailwind · Framer Motion · GSAP · Three.js · React Three Fiber · WebGL · Canvas2D · design systems · UI design · responsive · accessibility
automation + data	Excel · VBA · SharePoint · data analysis · reporting · workflow automation · process improvement
workforce management (WFM)	Verint · Genesys · NICE IEX · Alvaria · forecasting · scheduling · capacity planning · real-time staffing · shift coverage
leadership	team leadership · coaching · training · change management · AI adoption · SOPs · escalation management

S-05 EDUCATION & CERTIFICATION

High School Diploma · Computer Networking Administration · Landstown High School + ATC, Virginia Beach, VA · 2011
CompTIA Network+
